The Idea Form, The 20 Codes, The Kill Check

How an idea enters the factory through the Idea Form, how the 20 codes describe it, and how the kill check, verdict, data role and Screen gate decide whether work starts.

The Idea Form

M01-L1 · About 6 Minutes

You can write an idea as a one-line vision, a named payer and a clear pain, and name the four doors ideas come through.

The Idea Form

M01-L1

Two Pages Nobody Could Follow

Isla's aunt, Mara Quill, breeds dogs and holds a dog breeding licence from her local council.

The Idea Form

M01-L1

Stage 0 Starts In Reception

Every idea begins at Stage 0, called Idea, in a room called Reception.

The Idea Form

M01-L1

Four Doors Bring Ideas In

The first is the Idea Form, filled in by a person with an idea.

The Idea Form

M01-L1

Vision: What The App Is

It opens with a short name and a vision.

The Idea Form

M01-L1

Who Pays: Name The Payer

This means the person or business whose money keeps the app running, not just who uses it.

The Idea Form

M01-L1

Pain: The Problem In Plain Words

The pain is the problem the app removes, written the way the customer would say it.

The Idea Form

M01-L1

What Happens When You Submit

When the form is sent, the factory engine does five things at once.

The Idea Form

M01-L1

The Card Is Never Overwritten

The card is the single home of the idea's classification.

Recap

The Idea Form

- Start With Vision, Who Pays And Pain
- Ideas Arrive Through Four Doors
- The Card Is Kept, Never Overwritten

WHY IT MATTERS

Three Short Answers Beat Two Pages Of Features

Quick Check

The Idea Form

What three things does the brief on the Idea Form ask for?

A Colours, logo and name

B What it is, who pays and the pain

C Price, launch date and domain

D Screens, tables and rules

The 20 Codes

M01-L2 · About 6 Minutes

You can name the 4 code groups, read a code as a word plus a number and say which 6 codes are required.

The 20 Codes

M01-L2

Rory Meets TEN, CUST And SEN

Rory is twelve and was helping his sister fill in the Idea Form for Litterline.

The 20 Codes

M01-L2

Twenty Codes In Four Groups

A code is a short name for one question about how the app handles businesses, people and data.

The 20 Codes

M01-L2

Each Answer Is A Word Plus Number

Every answer is a word plus a number.

The 20 Codes

M01-L2

Group 1: Businesses

TEN (0-6) asks how many businesses use the app and who sits above them.

The 20 Codes

M01-L2

Group 2: Who Signs In

ROLE (0-2) asks whether all of a business's staff have the same access, or different roles with different access.

The 20 Codes

M01-L2

Group 3: Customers

CUST (0-5) asks how far into a business's own customers the app goes.

The 20 Codes

M01-L2

Group 4: Public

VIEW (0-2) asks whether a stranger can read anything without signing in.

The 20 Codes

M01-L2

Six Required, Fourteen Can Wait

Six codes are required, because the factory cannot judge an idea without them: TEN, CUST, SEN, VIEW, POST and PAY.

Recap

The 20 Codes

- **20 Codes Sit In 4 Groups**
- **Each Answer Is A Word Plus A Number**
- **Six Required, Fourteen May Be Not Yet Known**

WHY IT MATTERS

The Codes Decide Which Walls The App Needs

Quick Check

The 20 Codes

How many groups are the 20 codes sorted into?

A 2

B 3

C 4

D 5

Kill Check, Verdict And Data Role

M01-L3 · About 6 Minutes

You can apply the three kill questions, work out the suggested verdict, name the four data roles and explain the Screen gate.

Kill Check, Verdict And Data Role

M01-L3

Leo's Idea Stopped At Stage 0

Leo had an idea he loved: a version of Trimtable that would make one neat printed price list for a grooming salon.

Kill Check, Verdict And Data Role

M01-L3

Three Kill Questions

The kill check is three questions, each with a code name.

Kill Check, Verdict And Data Role

M01-L3

Any Yes Suggests KILL

If any one of the three answers is yes, the suggested verdict is KILL.

Kill Check, Verdict And Data Role

M01-L3

High SEN (0-3) Means HOLD

The engine suggests HOLD when SEN, the sensitivity code, is 2 or 3.

Kill Check, Verdict And Data Role

M01-L3

PASS: No Kill, SEN Below 2

An idea passes when no kill answer is yes and SEN is below 2, meaning the data is ordinary or personal, but not health and not children.

Kill Check, Verdict And Data Role

M01-L3

Data Roles: Who Is Responsible

Alongside the verdict, the engine suggests a data role.

Kill Check, Verdict And Data Role

M01-L3

The Role Picks The Duty Lines

Each role brings its own pack of checklist lines that the app must complete later.

Kill Check, Verdict And Data Role

M01-L3

The Screen Gate: Start Work

Now the idea reaches its first gate: Screen, between Stage 0 and Stage 1.

Recap

Kill Check, Verdict And Data Role

- **Three Kill Questions: FRAGILE, ONESHOT, NOHOOK**
- **HOLD When SEN (0-3) Is 2 Or More**
- **Data Role: CONTROLLER, PROCESSOR, BOTH Or NONE**

WHY IT MATTERS

Stopping A Weak Idea At Stage 0 Costs Nothing

Quick Check

Kill Check, Verdict And Data Role

Which kill question asks whether people would use the app once and stop?

A **FRAGILE**

B **NOHOOK**

C **ONESHOT**

D **SEN**
