Tables And Columns, Access Modes, Walls, Table Tests

How the codes and kits decide an app's tables, how each table is built, set and recorded, and how the walls are tested before the Schema gate.

How The System Makes The Tables

M05-L1 · About 6 Minutes

You can explain how codes and kits decide the tables, and how each table is built, set and recorded.

How The System Makes The Tables

Nia Thought Tables Were Easy

Nia keeps the spreadsheet for her family's walking group, so when she heard Stage 4 was about tables, she thought it would be easy.

How The System Makes The Tables

M05-L1

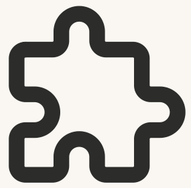

A Schema Is The Plan Of Tables

A schema is the plan of the tables that hold the data: which tables exist, which columns each one has, and who may read or write them.

How The System Makes The Tables

M05-L1

Codes And Kits Decide The Tables

The kits chosen earlier each bring their own tables.

How The System Makes The Tables

M05-L1

A Spec First, Then Built By Hand

Before anything is created, the tables and columns are written out as a spec, short for specification, saved as a CSV file.

How The System Makes The Tables

M05-L1

Access Modes Say Who Can Read

Every table has an access mode, a setting that says who may read and write its rows.

How The System Makes The Tables

M05-L1

Probe Every Table While Signed Out

Deciding a mode is not the same as having it.

How The System Makes The Tables

M05-L1

08

Every Table Gets A Register Row

The last piece is the table register, section 4.0 of the app's document.

How The System Makes The Tables

M05-L1

Never Rename, Add And Migrate Instead

One rule from the duties file is worth learning by heart.

WHY IT MATTERS

Tables Planned Once Are Cheap, Fixed Later Are Not

Quick Check

How The System Makes The Tables

What is a schema?

A The sales plan

B The plan of the tables that hold the data

C A type of brick

D The launch checklist

Walls And Table Tests

M05-L2 · About 6 Minutes

You can name the eight walls and describe the table tests that must pass before the Schema gate.

Walls And Table Tests

M05-L2

Seeing Someone Else's Clients

One morning, the booking app the salon used showed her another salon's client list, names and phone numbers included.

Walls And Table Tests

M05-L2

A Wall Keeps Two Parties Apart

In the factory, a wall is a rule that keeps two parties' data apart.

Walls And Table Tests

M05-L2

The Eight Walls W1-W8

The full set has eight walls, numbered W1-W8, and most codes on the idea card point to one.

Walls And Table Tests

M05-L2

Each Table Gets The Right Test

Stage 4 ends with table tests, section 4.4 of the document.

Walls And Table Tests

M05-L2

A 401 Means Not Allowed In

401 is a status code, a number a web server sends back with every answer.

Walls And Table Tests

M05-L2

Shared Tables Need Field-Level Tests

Imagine one dog's record that two breeders both hold a claim on, with each allowed to see different fields.

Walls And Table Tests

M05-L2

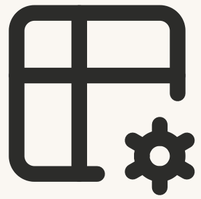

Every Test Has A Dated Result

A test without a result is just a hope.

Walls And Table Tests

M05-L2

The Schema Gate Passes By Itself

When every Stage 4 checklist line is done, and no section of the document still says pending, the engine moves the app on without anyone…
